No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sequence represents cDNA encoding a runner bean gibberellin (GA) 2cxidase, PcGAZOXI. This enzyme is a GA 2-beta-hydroxylase that acts on
CC Oxidase, PcGAZOXI. This enzyme is a GA 2-beta-hydroxylation is to control of a GA results in a biologically
CC Hydroxylation at the 2-beta-hydroxylation of a GX results in a biologically
inactive product, and is the most important route for GA metabolism in
CC plants, ensuring that the active hormones do not accumulate in plant
CC gibberellin 2-oxidase can be constitutively over-expressed or otherwise
CC gibberellin 2-oxidase can be constitutively over-expressed or otherwise
CC enhanced to reduce the concentration of bioactive GAs in the plants and
C therefore to inhibit plant growth of social crown such as enhancing lodgingCC resistence and grain yield in cereals, improving seedling quality,
C reducing the growth of amenity grasses, reducing shoot growth in orchard
and ornamental trees, improving tolerance to cold, drought and infection,
CC and increasing yields (by the diversion of assimilates from vegetative to
Creproductive organs). The nucleic acids may also be used to induce male
and/or female sterility (by expression in floral organs), prevent preCC fearus sprouting, reduce shoot growth in hedging plants, inhibit
C reversibility in the development or gerwination of seeds and reduce shoot
CC growth in commercial wood species. Antisense constructs of the nucleic
CC acids can also be used to transform plants to reduce the expression of GA
C 2-oxidase (Claimed) to promote plant growth, (e.g., to improve fruit set
CC and growth in seedless grasse, citrus fruits and pears), improve skin
CC texture and fruit shape in apples, increase stem length and rherefore
C increase growth in woody species
CC improve malting yields and quality in cereals (particularly parley), and
CC improve malting yields and darality in cereals iparticularly barley), and
CC improve organs.

```
The present invention relates to a DNA plasmid comprising a transfer DNA (T-DNA) comprising an Agrobacterium Ti plasmid first border region linked to at least one transgene linked to an Agrobacterium Ti plasmid second corder region, and located in the DNA plasmid outside of the T-DNA is a plant expression cassette comprising a plant cell non-lethal negative selectable marker gene linked to a vector backbone DNA. Also disclosed are a method for enhancing the selection of transgenic plants that do not contain vector backbone DNA, a method for reducing the copy number of a transgenie in a plant cell, and a transgenic plant produced by the method. The DNA plasmid comprises the expression cassette comprising a promoter that functions in plant cells operably linked to a plant cell non-lethal comparities the linked non-lethal negative selection marker gene. The promoter expresses the linked non-lethal negative selection marker gene. The promoter expresses the linked non-lethal negative selection marker gene comprises a plant hormone biosynthetic pathway gene, degradative gene, biosynthetic pathway can degradative selectable marker gene comprises a plant hormone comprises a transgene of signalling gene, or metabolic interference from antibiotic resistance and herbicide resistance. The transgene of agronomic interest. The plant hormone comprises a transgene of agronomic interest. The plant hormone biosynthetic pathway gene is selected from gibberelit acid pathway.
                                                                                                                                                                                                       New DNA plasmid comprising a T-DNA comprising an Agrobacterium Ti plasmid first border region linked to a transgene linked to an Agrobacterium Ti plasmid second border region, useful for enhancing production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     genes, cytokinin pathway genes, auxin pathway gene, ethylene pathway genes, and abscialc acid pathway genes. The plasmid is useful for enhancing the production of commercially viable transgenic plants. The present sequence represents DNA encoding Phaseolus coccineus gibberellin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -oxidase. The sequence is used as a non-lethal negative selectable
                                                                                                        ×

                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a gibberellic acid 2-oxidase 1 protein describes which is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels. Gibberellic acid levels and interest or controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthetic pathway sequence, diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, 3beta-hydroxylase, 2-xidase, phytones synthase, C-20 oxidase, and a 2beta-hydroxylase polynucleotides to achieve this. The method is used to control seed gibberellin biosynthetic pathway and restoration of normal seed gibberellin biosynthetic pathway and restoration of normal seed germination, in transgenic plants The plants produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  304

                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to control of gibberellin (GA) levels in plants.

The method involves producing transgenic plants having a phenotype of reduced seed germination and reduced early seedling growth, then restoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in garicultural production so that unfavorable environmental conditions normally reducing agronomic output can be avoided and yields increased. Plants also demonstrate increased uniformity of germination, emergence and seedling vigor, so increasing yields at harvest. The method is especially useful in crop plants such as e.g. canola, soybean, cotton, etc., and is also useful in storage and transport of seeds to reduce premature germination which may affect agronomic or food quality of the seeds. The present sequence is soybean GA-oxidase 1 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ŝ

```
completed sequence encoding a polypeptide having GTP cyclohydrolase in 1/3,4-dihydrovy-2-butanone-4-phosphate synthase activity, appearing as DM94266. Also included are a recomprising the polymucleotide operably linked control and a sequence encoding a plant comprising the polymucleotide operably linked control and construct comprising transforming a cell with the polymucleotide, a cell comprising transforming a cell with the polymucleotide and regenerating a plant from the transformed plant cell), a plant comprising transformed a plant cell with the polymucleotide and regenerating a plant from the transformed plant cell), a plant comprising the recombinant DNA construct. Also disclosed as new are mucleic acid (CDNA) fragments and assembled contigs encoding plant metabolism proteins consen from GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate companies. Dioxygentase, Ribcflavin specific deaminase, Ethylane response consent from GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate companies. Dioxygentase, Ribcflavin specific deaminase, Ethylane response consent from GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate companies. Dioxygentes in Peglycoprotein I, Peglycoprotein I,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate synthase nucleic acid and proteins, useful for creating transgenic plants where polypeptides are present at higher or lower levels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1, Kinney AJ, Rafalski JA, Orozco EM, Miao G, Famodu OO;

nucleotide sequence encoding a polygeptide having GTP cyclohydrolase

II/3,4-dihydroxy-2-butanone-4-phosphate synthase activity, appearing as

ECC II/3,4-dihydroxy-2-butanone-4-phosphate synthase activity, appearing as

ECC ADM94266. Also included are a vector comprising the polynucleotide, a

recombinant DNA construct comprising the polynucleotide operably linked

to at least one regulatory sequence, transforming a cell with the

ECC to at least one regulatory sequence, transforming a cell with the

ECC producing a plant (comprising transforming a plant cell with the

ECC polynucleotide and regenerating a plant from the transformed plant cell),

ECC a plant comprising the recombinant DNA construct and a seed comprising

the recombinant DNA construct. Also disclosed as new are nucleic acid

(CDNA) fragments and assembled contigs encoding plant metabolism proteins

CCDNA) fragments and assembled contigs encoding plant metabolism proteins

CCDNA) fragments and assembled contigs encoding plant metabolism proteins

CCDNA) fragments and assembled contigs encoding plant metabolism proteins

CCDNA) fragments and assembled contigs encoding plant metabolism proteins

CCDNA) fragments and assembled contigs encoding plant metabolism proteins

CCDNA) fragments and assembled contigs encoding plant metabolism proteins

CCDNA) fragments and assembled contigs encoding plant metabolism proteins

CCDNA) fragments and assembled contigs encoding plant metabolism protein

CCDNA) fragments and assembled contigs encoding plants, P-glycoprotein ATPOP, P-glycoprotein

CCDNA) fragments are present at higher or lower levels than normal or in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate synthase nucleic acid and proteins, useful for creating transgenic plants where polypeptides are present at higher or lower levels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SM, Kinney AJ, Rafalski JA, Orozco EM, Miao G, Famoαu CO;

cell types or in developmental stages in which they are not normally found. The polynucleotides can be used as probes for genetically and physically mapping genes and as markers for traits linked to those genes. The nucleic acid fragments may be used as restriction fragment length colymorphism (RFLP). It can also be used to probe Southern blots containing restriction endonuclease-treated genomic DNAs of a set of individuals representing parent and progeny of a defined genetic cross. The nucleic acid fragments may also be used as hybridisation probes consisting the mutation products generated from the mutation population using the mutation tag sequence primer in conjunction with an arbitrary genomic site primer. The peptides can also be used to immunise animals to produce polyclonal or monoclonal antibodies with specificity for peptides or produce polyclonal or monoclonal antibodies with specificity for peptides or proteins comprising the amino acid sequences. Antibodies are useful for detecting the polypoptides in altu in cells or in vitro in cell extracts. The present sequence encodes a plant metabolism protein (or \$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$

                                                                                                                                              This sequence represents CDNA encoding an Arabidopsis thaliana gibberellin (GA) 2-oxidase, PcGA2ox2. This enzyme is a GA 2-beta-hydroxylation at Let and for which 2-beta-hydroxylation is its only activity. Hydroxylation at the 2-beta position of a GA results in a biologically inactive product, and is the most important route for GA metabolism in plants, ensuring that the active hormones do not accumulate in plant issues. The nucleic acids can be used to transform plants so that gibberellin 2-oxidase can be constitutively over-expressed or otherwise enhanced to reduce the concentration of bloactive GAs in the plants and therefore to inhibit plant growth. Growth inhibition is useful in many agricultural and horticultural applications such as enhancing lodging-resistance and grain yield in cereals, improving seedling

quality, reducing the growth of amenity grasses, reducing shoot growth in orchard and ornamental trees, improving tolerance to cold, drought and infection, and increasing yields (by the diversion of assimilates from vegetative to reproductive organs). The nucleic acids may also be used to induce male and/or female sterility (by expression in floral organs), prevent pre-harvest sprouting, reduce shoot growth in hedging plants, inhibit reversibility in the development or germination of seeds and reduce shoot growth in commercial wood species. Antisense constructs of the nucleic acids can also be used to transform plants to reduce the expression of GA 2-oxidase (claimed) to promote plant growth, (e.g., to improve fruit set and growth in seedless grapes, citrus fruits and learn), improve skin texture and fruit shape in apples, increase stem length and therefore yield in sugar cane, increase yield and earliness in celery and rhubarb, improve malting yields and quality in cereals (particularly barley), and increase growth in woody species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1,

The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ1754) used not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    150

M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                625
                                                                                                                                                                                                                                                                                     55

The method involves producing transgenic plants having a phenotype of reduced seed germination and reduced early seedling growth, then restoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in agricultural production so that unfavorable environmental conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          conditions in crops to increase yields, using transgenic plants having reduced seed germination and early seedling growth then treatment to
